

ABSTRACT

The invention relates to an item of footwear, particularly an item of sports footwear, e.g. ski boot, cross-country ski boot, hiking footwear or the like. The leg (5) of the item of footwear is made of a textile material and is joined, preferably adhered, to a preformed, for example, extruded toe cap (4), to a, for example, extruded counter (6), and to an anatomically shaped midsole (2), above all when a watertight item of footwear is desired.
